RE: Water Savings with *Conservacap*

Dear Ms. Howell:

We have had amazing results using *Conservacap* in our Nursing Facility.

Here on Long Island, water is at a premium and any measures we can take to reduce our usage are always given time and consideration. A main concern for us is always functionality; will it really work? Our 120 toilets are used constantly and we can't afford stoppages or back ups in our longer lateral sewer lines.

Conservacap was a win, win situation. The caps were easily installed and the savings were obvious to anyone who timed a flush cycle. The renovation was affordable and paid for itself in just a matter of months. This allowed us to retrofit 30 fixtures at a time without having to budget funds for the total renovation.

To date, we have not had any maintenance problems with the renovated fixtures, and our overall system is working perfectly. I would heartily recommend *Conservacap* to anyone who is serious about reducing water/sewer costs.

Sincerely,

Fred Strade
